ARvee provides machine-related, board-interface software that enables users to control machinery, robots, and other electronic equipment from a computer workstation. The software shown on the reverse side for **DuPont's Diagnostic Imaging Division** enables employees to control and test up to eight blood analysis devices from one computer. ARvee also developed a complete system for **Biochemical Diagnostics Corporation** which operates its latest laboratory automation equipment. ARvee has provided similar interface software for **Colgate-Palmolive's** factory management system and **Symbol Technologies'** environmentally controlled product testing. These customized **interface** systems take computer automation from its traditional administrative roll to an operational environment that improves quality control and increases overall productivity.

a particular nation; the principles or methods advocated by any socialistic association known as an international.
